LINGAYA'S VIDYAPEETH

Department of Computer Science & Engineering

Scheme & Syllabus

Of

B.Tech (CSE-Artificial Intelligence)

Batch: 2024-2028

Deemed-to-be University u/s 3 of UGC Act 1956

VISION

To be a school, committed to education, research & innovation and develop globally competent professionals in the area of Computer Science, Information Technology and Computer Applications who are responsible citizens and have respect for life and sensitivity towards environment.

MISSION

- 1. To develop professionals and leaders in Computer Science, IT and allied areas who have right attitude and aptitude to serve the society.
- 2. To develop and maintain state-of-the-art infrastructure and research facilities to enable create, apply and disseminate knowledge.
- 3. To foster linkages with all stakeholders for continuous improvement in academics in Computer Science, IT and Computer Applications.
- 4. To develop human potential to its fullest extent so that intellectually capable and imaginatively gifted leaders can emerge who have deep respect for human life and values.
- 5. To undertake disciplinary and inter-disciplinary collaborative research and innovation which offer opportunities for long term interaction with academia and industry and develop technologies relevant to the society.

VIDYAPEETH

Deemed-to-be University u/s 3 of UGC Act 1956

PROGRAM OUTCOMES:

- **PO1- Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering and Application fundamentals, and an engineering and Application specialization to the solution of complex engineering problems.
- **PO2- Problem Analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3-Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4- Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5- Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **PO6-** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7- Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8-** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9- Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10- Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11- Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12- Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES:

PSO1: To equip the students with theoretical and implementation knowledgebase in all the latest areas of Computer Science & Engineering for a successful career in software industries, pursuing higher studies, or entrepreneurial establishments.

PSO2: To nurture the students with the critical thinking abilities for better decision making by offering them a socially acceptable solutions to real life problems through computing paradigm.

PSO3: To nurture the students with the comprehensive analytical and design abilities by offering them techno-commercially feasible solutions of real business problems through computing.

LINGAYA'S VIDYAPETH

Deemed-to-be University u/s 3 of UGC Act 1956

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Know the basic concepts of programming languages as well as operating system

CO2: Learn the basics of programming using C

CO3: Undergo the functions and pointers

CO4: Learn about the structures, unions as well as functions using recursion

CO5: Know about the dynamic programming as well as file handling

UNIT I

BASICS OF C PROGRAMMING: Problem definition, Representation of Algorithms: Flow charts/ Pseudocode with example, Introduction to C: Structure of C program, C character set, Identifier and Keywords, constants, variables, Data types ,Type conversion, Types of operators, Input and output functions in C, header files, common programming errors, Control Statements, Sequencing, Condition and iteration.

Arrays and Strings: Declaring, Referencing and initializing arrays, array subscript, using for loop for sequential access, multi-dimensional array, String basics string library functions, assignment and substring, concatenation, string comparison, etc.

UNIT II

FUNCTIONS AND POINTERS: Definition of function, function prototype, Purpose of main function, passing parameters, Scope of function, recursion, Call by value and reference, Types of storage classes, Scope of variable: Global and local, static variables, Recursion. Pointer variables, initializing pointers, pointer operators, pointer expressions, pointers and arrays, pointer and functions.

UNIT III

STRUCTURES & UNIONS: Defining a structure, Declaring structure variables, Structure initialization, Copying and Comparing Structure variables, Array of structures, Arrays within structure, nested structures, Unions. Recursion as a different way of solving problems.

UNIT IV

DYNAMIC ALLOCATION, AND FILE HANDLING: C's dynamic allocation functions. Streams and file types, opening and closing a data file, input and output operations, text mode versus binary mode, formatted input output operations with files, random access to files.

UNIT V

OBJECT ORIENTED PROGRAMMING CONCEPTS:

Introduction: Procedural Programming Vs Object Oriented Programming, OOP concepts- Class, Object, Abstraction, Encapsulation, Inheritance, Polymorphism, Function Overloading, Operator Overloading, Constructors, Virtual function.

| CS-151E | CS-151E PROBLEM SOLVING USING C AND C++ LAB | LTP | Cr |
|---------|---|-------|----|
| CS-131E | I ROBLEM SOLVING USING CAND C++ LAB | 0 0 2 | 1 |

COURSE OUTCOMES

CO1 Read, understand and trace the execution of programs written in C language.

CO2 Write the C code for a given algorithm.

CO3 Implement Programs with pointers and arrays, perform pointer arithmetic, and use the pre-processor.

CO4 Write programs that perform operations using derived data types.

Program List

SEQUENTIAL CONTROL STATEMENTS

- 1. Write a program to calculate simple interest
- 2. Write a program to calculate average of three numbers
- 3. Write a program to add digits of a four digit number
- 4. Write a program to check whether the person if eligible for voting or not

CONDITIONAL CONTROL STATEMENTS

- 5. Write a program to find greatest of two numbers
- 6. Write a program to find out which type of triangle it is
- 7. Write a program to find out greatest of three numbers
- 8. Write a program to evaluate performance of the student
- 9. Write a program to make a basic calculator

LOOP CONTROL STATEMENTS

- 10. Write a program to print Fibonacci up-to the given limit
- 11. Write a program to find the sum of digits of a number
- 12. Write a program to find factorial of a number
- 13. Write a program to print table of any number
- 14. Write program for printing different pyramid pattern

ARRAYS AND STRINGS

- 15. Write a program to find the sum and average of 50 students
- 16. Write a program to sort the array elements
- 17. Write a program to add 2 matrix
- 18. Write a program to multiply 2 matrices
- 19. Write a program to perform sting operations

FUNCTIONS & POINTERS

- 20. Write a program to calculate factorial of a number using recursive function
- 21. Write a program to print first n Fibonacci using recursive function
- 22. Write a program using function to swap two numbers using call by reference

STRUCTURES

- 23. Write a program to read an employee record using structure and print it
- 24. Write a program to prepare salary chart of employee using array of structures

FILE HANDLING

- 25. Write a program to count the number of characters, spaces, tabs, new line characters in a file.
- 26. Write a program to receive strings from keyboard and write them to a file.
- 27. Write a program to copy a file to another.
- 28. Write a program to read strings from a file and display them on screen

OBJECT ORIENTED PROGRAMMING USING C++ PROHRAM LIST

- 29. Write a program that uses a class where the member functions are defined inside a class.
- 30. Write a program that uses a class where the member functions are defined outside a class.
- 31. Write a program to demonstrate the use of static data members.
- 32. Write a program to demonstrate the use of const data members.
- 33. Write a program to demonstrate the use of zero argument and parameterized constructors.
- 34. Write a program to demonstrate the use of dynamic constructor...
- 35. Write a program to demonstrate the use of explicit constructor...
- 36. Write a program to demonstrate the use of initializer list.
- 37. Write a program to demonstrate the overloading of increment and decrement operators.
- 38. Write a program to demonstrate the multilevel inheritance...
- 39. Write a program to demonstrate the exception handling.

Deemed-to-be University u/s 3 of UGC Act 1956

| CS-102E | PYTHON PROGRAMMING | L-T-P | Cr |
|---------|--------------------|-------|----|
| | | 3-0-0 | 3 |

OBJECTIVE

To build programming logic and thereby developing skills in problem solving using Python programming language; To be able to do testing and debugging of code written in Python Emphasize the concepts and constructs rather than on language features.

PRE-REQUISITES

The students are expected to have basic knowledge of programming.

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: To learn and understand Python programming basics, looping, control statements and string manipulations.

CO2: To learn basic concepts of list, tuple and dictionary data structures.

CO3: To learn and know the concepts of Structure and Functions.

CO4: To learn and know the concepts of file handling, exception handling.

CO5: To learn how to analyze and visualize the data.

UNIT I:

Introduction to Python: History, Features & Benefits of Python, Structure of a Python Program, Identifiers and Keywords, Concept of Variable, Memory Allocation for Variable, Data Types in Python, Conversion Functions, Operators, Input and Output Function, Control Statements: Conditional Statement, Loops, break, continue and pass statements.

UNIT II:

Data Structures & Function: String, Lists, Tuples, Dictionary Data Structure, Built-in Library Function, Method and Operation on these Data Structure. Defining Function, Type of Function Arguments (Required Arguments, Keyword Arguments, Default Arguments, Variable-Length Arguments), Scope of a Variable, Global Vs Local Variable, Python Modules & Packages.

UNIT III:

Python Object Oriented Programming:

Features of Object Oriented Programming, Creating Classes, Class Variable, Instance Variable, init_() Method, Creating Instance Object, Class Attributes, Access Specifiers in Python, Instance Method Vs Class Method. Inheritance & Polymorphism, Overriding and Overloading Methods.

UNIT IV:

Python File Handling, Exception Handling: Opening & Closing Files, File Access Modes, File Object

Attributes, Reading and Writing Files, Manipulating File Pointer using seek and tell. Programming using File Operations. Exception Handling in Python.

UNIT V:

Data Analysis & Visualization:

Dataset generation, Importing Dataset: Importing and Exporting Data, Basic Insights from Datasets, Cleaning and Preparing the Data: Identify and Handle Missing Values, Basic Visualization Tools, Creating and plotting Maps.

| CC 153E | CS-152E PYTHON PROGRAMMING LAB | LTP | Cr |
|---------|--------------------------------|-----|----|
| CS-152E | PYTHON PROGRAMMING LAB | 002 | 1 |

COURSE OUTCOMES

CO1: Define basic concepts of python programming if statement, loops.

CO2: Define and demonstrate the use of built-in data structures "lists" and "dictionary".

CO3: Design and implement a program to solve a real-world problem

CO4: Design and implement a program how to handle exceptions and files.

CO5: Design and implement a program for data analysis and visualization.

LIST OF PROGRAMS

Program 1: Programs using if else structure

- a) Find the Largest Among Three Numbers.
- b) Python Program to Take in the Marks of 5 Subjects and Display the Grade

Program 2: Programs using for and while loop

- a) Python Program to check whether given number is Prime Number or not.
- b) Python Program to Find the Sum of Digits in a Number.

Program 3: Program using List and String data structure

- a) Write Python Program to input a list of integers, (1) display the no of elements in the list (2) display minimum and maximum element in the list (3) display sum of square of all the element in the list (4) (5) add a new element at end and display the list (6) add a new element at given index and display list (7) display the occurrence of given element in the list (8) remove the given element in the list (9) add element from a new list from given list (10) sort the given list & reverse the given list (11) also perform slicing, concatenation and multiplication operation.
- b) A fruit seller sells different type of fruits. Type of fruits and corresponding rates are stored in two different lists. Customer can order any type of fruit (one or more type) in any quantity. Iftotal bill of customer is greater than 500, customer is given 10% discount. If any of the fruits required by the customer is not available in the store, then consider the bill amount to be -1. Write a Python program to calculate and display the bill amount.

Program 4: Programs using concept of list, tuple & dictionary

a) A furniture seller sells different type of furniture, Type of Furniture and rates are stored in a dictionary. Customer can order any type of furniture (one or more type) in any quantity. If total bill of customer is greater than 10,000, customer is given 5% discount. 8% GST is charged on total bill. If any of the furniture required by the customer is not available in

- thestore, then consider the bill amount to be -1. Write a Python program to calculate and displaythe bill amount.
- b) Students name and their corresponding marks are stored in a dictionary. Write a Python program to perform following (1) Display name and marks of each student (2) Display the names of top two scorer (3) display the class average for this course (4) check if the marksfor given student is stored in dictionary or not, if not add the name and marks in the dictionary else display his/her marks (5) delete the name and marks of a given student in the dictionary (6) add name and marks from another dictionary and display combined dictionary.

Program 5: Program using Function in Python:

- a) Write Python functions using the concept of Keyword & default arguments and write a program to use them.
- b) Write python functions to use the concept of variable length argument & global variable.

Program 6: Program using concept of Class, object, Class Variable, Class Method:

- a) Create a class Account with name, account no and balance as attribute and no_of_accountsas class variable. Account no should be generated automatically (starting from 1) using the class variable no_of_account. Add the methods for displaying the account information, depositing given amount, withdrawing given amount and initializer method to initialize the object. Create objects of Account class and call different method to test the class.
- b) Create a class Employee with name, empid, salary as attribute and no_of_ employee and annual_incr (% annual increment) as class variable, empid should be generated automatically (starting from 1) using the class variable, no_of_employee. Add the instance methods for displaying the employee information, annually increasing the salary with help of class variable annual_incr, class method to change the value of annual_incr and initializer method to initialize the object. Create objects of employee class and call different method to test the class (program using class method).

Program 7: Program using the concept of Inheritance

- a) Create a class Polygon to represent a polygon having no of sides and a list having magnitude of each side as attribute. Add the inputSides() to input sides and displaySides() to display sides as methods. Derive a class Triangle from Polygon and add an additional method displayArea() to display area. Create object of Triangle and call different methods to test the class.
- b) Create a class Person having name, age, as attributes, __init__() method to initialize the object and display() to display person information. Derive a class Student from Person having roll no, University name, branch as additional attributes and_init_(), display() to display student information and change_Branch() method. Create object of Student type and call different methods to test the class.

Program 8: Program using the concept of Polymorphism, Operator Overloading

a) In a retail outlet there are two modes of bill Payment (1) Cash: Calculation includes VAT(10%) Total Amount = Purchase amount + VAT (2) Credit card: Calculation includes

processing charge and VAT Total Amount = Purchase amount + VAT (10%) + Processing charge (2%) The act of bill payment is same but the formula used for calculation of total

- amount differs as per the mode of payment. Can the Payment maker simply call a method and that method dynamically selects the formula for the total amount? Demonstrate this Polymorphic behaviour with code.
- b) Write a program to create a class to represent length in feet and inch. Overload the "+" operator to add the two object of length type.

Program 9: Program on file handling and Exception handling in Python

- a) Write a python program to write few lines on a file, read it back and create a dictionary having each word in file as keys in dictionary and occurrence of these word as values and print the dictionary.
- b) Write a program to show the concept of exceptional handling.

COMPUTER ARCHITECTURE & ORGANIZATION

| LTP | Cr |
|-----|----|
| 300 | 3 |

OBJECTIVE

To provide basic knowledge of internals of computer, its architecture, components, terminologies, etc. at minutelevel and ultimately about the working of a digital computer hardware as a whole.

PRE-REQUISITES

Knowledge of data structures, microprocessors and interfacing.

COURSE OUTCOMES

CO1: Understand the theory and architecture of central processing unit. Analyse some of the designissues in terms of speed, technology, cost, performance.

CO2: Design a simple CPU with applying the theory concepts. Use appropriate tools to design verify and testthe CPU architecture.

CO3: Learn the concepts of parallel processing, pipelining and inter-processor communication

CO4: Exemplify in a better way the I/O and memory organization.

CO5: Define different number systems, binary addition and subtraction, 2's complement representation and operations with this representation.

UNIT I

GENERAL SYSTEM ARCHITECTURE: Functions and block diagram of computer, store program controlconcept, Flynn's classification of computers (SISD, MISD, MIMD); CPU, caches, main memory, secondary memory units & I/O; Counters and Designing of counters.

UNIT II

INSTRUCTION SET ARCHITECTURE: Instruction codes, instruction set formats(fixed, variable, hybrid),types of instructions, memory reference, register reference, I/O reference; addressing modes: register, immediate, direct, indirect, indexed; operations in the instruction set; arithmetic and logical, data transfer, control flow; types of interrupts; timing and control; instruction set based classification processors (RISC, CISC, and their comparison).

UNIT III

BASIC ARITHMETIC AND PROCESSING MODULE: Addition and subtraction of signed

Numbers-Design of fast adders-Multiplication of positive numbers-Signed operand multiplication and fastmultiplication —integer division

Fundamental Concept-Execution of complete instruction-Multiple bus organization – Hardwired control-Micro Programmed control-Pipelining and its types.

LIMIT IV

MEMORY HIERARCHY & SYSTEM: Need for a memory hierarchy (Locality of Reference Principle, memory hierarchy in practice: cache, main memory and secondary memory); Basic Concept Main memory (semiconductor RAM & ROM, Speed, Size and Cost, static & dynamic memory types); cachememory: associative & direct mapped cache organizations.

UNIT V

INTRODUCTION TO PARALLELISM: Goals of parallelism (exploitation of concurrency, throughput enhancement); Amdahl's law; instruction level parallelism (pipelining, super scaling-basic features); processorlevel parallelism (multiprocessor systems overview).

TEXT BOOK

| CC 205E | DISCOPETE MATHEMATICS and CDADILTHEODY | LTP | Cr |
|---------|--|-----|----|
| CS-205E | DISCRETE MATHEMATICS and GRAPH THEORY | 310 | 4 |

OBJECTIVES

To lay mathematical foundation for the fundamentals of various computational structures such as Boolean algebra, propositional logic, graph and trees.

PRE-REOUISITES: Knowledge of Data Structure

COURSE OUTCOMES

- **CO1:** Perform operations on various discrete structures such as sets, functions, relations, andsequences.
- CO2: Ability to solve problems using Counting techniques, Permutation and Combination, Recursion and generating functions
- CO3: Ability to solve problems of Recursion and Recurrence Relation
- **CO4:** Understand the various properties of algebraic systems like Rings, Monoids and Groups
- **CO5:** Apply algorithms and use of graphs and trees as tools to visualize and simplify Problems.

UNIT I

SET THEORY: Introduction to set theory; set operations; algebra of sets: duality, finite and infinite sets, classes of sets, power sets, multi sets, Cartesian product, representation of relations, types of relation, equivalence relations and partitions, partial ordering relations and lattices; function and its types, composition of function and relations; cardinality and inverse relations.

UNIT II

PROPOSITIONAL CALCULUS AND TECHNIQUES OF COUNTING: Basic operations: AND (Λ) , OR (V), NOT (\sim) , truth value of a compound statement, propositions, tautologies, contradictions, Permutations with and without repetition, combination.

UNIT III

RECURSION AND RECURRENCE RELATION: Polynomials and their evaluation; sequences, introduction to AP, GP and AG series, partial fractions; linear recurrence relation with constant coefficients; homogeneous solutions, particular solutions, total solution of a recurrence relation using generating functions.

UNIT IV

ALGEBRIC STRUCTURES: Definition and examples of a monoid, semigroup, groups and rings; homomorphism, isomorphism and auto morphism; subgroups and normal subgroups; cyclic groups, integral domain and fields; co-sets; Lag range's theorem

UNIT V

GRAPHS: Introduction to graphs, directed and undirected graphs; homomorphic and isomorphic graphs; subgraphs; cut points and bridges; multigraph and weighted graph; paths and circuits, shortest path in weighted graphs; Eulerian path and circuits, Hamilton paths and circuits; planar graphs; Euler's formula.

| CS-207E | OPERATING SYSTEMS | LTP | Cr |
|---------|-------------------|-----|----|
| | | 300 | 3 |

COURSE OBJECTIVE

To provide the knowledge of internals, different types and purpose of operating systems

PRE-REQUISITES

Knowledge of computer organization and architecture programming skills

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Understand the basics of operating systems like kernel, shell, types and views of operating systems

CO2: Describe the various CPU scheduling algorithms.

CO3: Explain various process synchronization and removing deadlock.

CO4: Use disk management and disk scheduling algorithms for better utilization of externalmemory.

CO5: Understand various file system.

UNIT I

INTRODUCTION: Introduction to operating system concepts (including multitasking, multiprogramming, multi user, multithreading, etc)., types of operating systems: batch operating system, time-sharing systems, distributed OS, network OS, real time OS, embedded and smart cardOS, various operating system services, architecture, system programs and calls.

UNIT II

PROCESS MANAGEMENT: Process concept, Life cycle and implementation of process, Thread usage and implementation in user space and in kernel, process scheduling, operation on processes, CPU scheduling, scheduling criteria, scheduling algorithms -First Come First Serve (FCFS), Shortest-Job-First (SJF), priority scheduling, Round Robin (RR), multilevel feedback queue scheduling.

UNIT III

DEADLOCK: Deadlocks, Deadlock characteristics, prevention, avoidance using banker's algorithm, detection and recovery;

Process Synchronization: Critical section problems, mutual exclusion with busy waiting, Process synchronization, semaphores: binary and counting semaphores, Classical IPC problems: dining philosophers' problem, readers-writers problem.

UNIT IV

MEMORY MANAGEMENT: Logical & physical address space, swapping, contiguous memory allocation, non-contiguous memory allocation paging and segmentation techniques, segmentation with paging, virtual memory management - demand paging & page-replacement algorithms, demand segmentation.

UNIT VS 3 Of UGC Act 1956

I/O AND FILE YSTEMS: I/O hardware, device controllers, interrupt handlers, device drivers, application I/O interface, kernel, transforming I/O requests, performance issues, Different types of files and their access methods, directory structures, various allocation methods, disk scheduling and management and its associated algorithms, introduction to distributed file system.

| CS-211E | CS-211E DATA STRUCTURE USING C++ | LTP | Cr |
|---------|----------------------------------|-------|----|
| CS-211E | DATA STRUCTURE USING C++ | 3-0-0 | 3 |

COURSE OBJECTIVE: To relay the theoretical and practical fundamental knowledge of most basic data structure like array linked list, stack, queue, tree & graph. To understand the implementation of these data structure to be familiar with basic techniques of algorithm analysis and analysis of the algorithms used for implementation of these data structure.

PRE-REQUISITES: Knowledge of basic computer programming.

COURSE OUTCOMES

CO1: Understand the concept of dynamic memory management, data types, algorithm, Big O notation.

CO2: Understand basic data structures such as arrays, linked list, stack and queue.

CO3: Describe the hash function and concepts of collision and its resolution methods.**CO4**: Solve problem involving graph, trees and heaps.

CO5: Apply algorithm for solving problems like sorting, searching, insertion and deletion of data.

UNIT I: INTRODUCTION TO DATA STRUCTURES AND RUNNING TIME:

Definition of data structures and abstract data types; linear vs. non-linear data structure; primitive vs. non-primitive data structure; static and dynamic implementations; arrays, 1,2-dimensional arrays, insertion & deletion in 1-D array; examples and real life applications. Time complexity; Big Oh notation; running times; best case, worst case, average case; factors depends on running time; introduction to recursion.

UNIT II: STACKS AND QUEUES:

Stacks: definition, array based implementation of stacks, examples: infix, postfix, prefix representation; conversions, applications; definition of queues, circular queue; array based implementation of queues.

UNIT III: LINKED LISTS:

Lists; different type of linked Lists; implementation of singly linked list, linked list implementation of stacks and queues; implementation of circular linked list; implementation of doubly linked list, applications.

UNIT IV: TREES AND GRAPHS:

Definition of trees and binary trees; properties of binary trees and implementation; binary traversal pre-order, post-order, in-order traversal; binary search trees: searching, insertion & deletion. Definition of undirected and directed graphs; array based implementation of graphs; adjacency matrix; path matrix implementation; linked list representation of graphs; graph traversal: breadth first traversal, depth first traversal; implementations and applications.

UNIT V: SORTING AND **SEARCHING ALGORITHMS**:

Introduction, selection, insertions, bubble sort, efficiency of above algorithms; merge sort, merging of sorted arrays and algorithms; quick sort algorithm analysis, heap sort, searching algorithms: straight sequential search, binary search (recursive & non–recursive algorithms).

ARRAY OPERATIONS

LIST OF EXPERIMENTS

- 1. Write a program to insert an element at given position in linear array
- 2. Write a program to insert an element in sorted array.
- 3. Write a program to delete an element from given position in linear array
- 4. Perform following operations on matrices using functions only
 - a) Addition b) Subtraction c) Multiplication d) Transpose

SEARCHING

- 5. Search an element in a linear array using linear search.
- 6. Using iteration and recursion concepts write programs for finding the element in thearray using Binary Search Method

RECURSION

- 7. Write a program to compute factorial of given number using recursion
- 8. Write as program to solve Tower of Hanoi problem using recursion
- 9. Write a program to find power of given number using recursion

STACK & QUEUE

- 10. Write a program for static implementation of stack
- 11. Write a program for dynamic implementation of queue
- 12. Write a program for static implementation of circular queue
- 13. Write a program for dynamic implementation of queue
- 14. Write a program to evaluate a postfix operation

LINKED LIST

- 15. Create a linear linked list & perform operations such as insert, delete at end, at leg & reverse the link list
- 16. Create a circular linked list & perform search, insertion & delete operation
- 17. Create a doubly linked list & perform search, insertion & delete operation

SORTING ALGORITHMS

- 18. Write program to implement Bubble, Insertion & selection sort.
- 19. Write program to implement quick sort
- 20. Write program to implement merge sort

| CS-202E | DATABASE MANAGEMENT | LTP | Cr |
|---------|---------------------|-----|----|
| | SYSTEM | | |
| | | 300 | 3 |

OBJECTIVES

To understand the different issues involved in the design and implementation of a database system. **PRE-REQUISITES** Knowledge of Operating system

COURSE OUTCOMES

CO1: For a given query write relational algebra expressions for that query and optimize the developed expressions

CO2: For a given specification of the requirement design the databases using ER method and normalization CO3: For a given specification construct the SQL queries for Open source and Commercial DBMS -MYSQL, ORACLE, and DB2

CO4: For a given query optimize its execution using Query optimization algorithms

UNIT 1:

Database system architecture: Data Abstraction, Data Independence, Data Definition Language (DDL), Data Manipulation Language (DML). Data models: Entity-relationship model, network model, relational and object oriented data models, integrity constraints, data manipulation operations

UNIT-2:

Relational query languages: Relational algebra, Tuple and domain relational calculus, SQL3, DDL and DML constructs, Open source and Commercial DBMS - MYSQL, ORACLE, DB2, SQL server. Relational database design: Domain and data dependency, Armstrong's axiom, Normal forms, Dependency preservation, Lossless design. Query processing and optimization: Evaluation of relational algebra expressions, Query equivalence, Join strategies, Query optimization algorithms.

UNIT-3:

Storage strategies: Indices, B-trees, hashing.

UNIT-4:

Transaction processing: Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery **UNIT-5**:

Database Security: Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

TEXT BOOK

"Database System Concepts", 6th Edition by Abraham Silberschatz, Henry F. Korth, S. Sudarshan, McGraw-Hill.

| CS-204E | DESIGN & ANALYSIS OF ALGORITHMS | LTP | Cr |
|---------|---------------------------------|-------|----|
| | | 3-1-0 | 4 |

OBJECTIVE

To relay the theoretical and practical aspects of design of algorithms

PRE-REOUISITES

Knowledge of fundamentals of basic computer programming for implementing algorithms

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Define the basic concepts of algorithms and analyze the performance of algorithms.

CO2: Discuss various algorithm design techniques for developing algorithms.

CO3: Discuss various searching, sorting and graph traversal algorithms.

CO4: Understand NP completeness and identify different NP complete problems.

CO5: Discuss various advanced topics on algorithms.

UNIT I

BRIEF REVIEW: Growth of functions, Asymptotic Notations, Representation of Graphs, Breadth First Search, Depth First Search and Data Structures for Disjoint Sets.

unition of the know

DIVIDE AND CONQUER: General method; binary search; merge sort; quick sort; Strassen's matrix multiplication algorithms and analysis of algorithms for these problems.

UNIT III

GREEDY METHOD: General method; knapsack problem, job sequencing with deadlines; minimum spanning trees Algorithm of Kruskal's and Prim's; single source paths and analysis of these problems.

UNIT IV

DYNAMIC PROGRAMMING AND BACK TRACKING: General method; optimal binary search trees; O/I knapsack; the traveling salesperson problem, 8 queens 'problem; graph coloring; Hamiltonian cycles

UNIT V

NP HARD AND NP COMPLETE PROBLEMS: Basic concepts; Cook's theorem; NP hardgraph and NP scheduling problems; some simplified NP hard problems.

OBJECTIVE

To relay the theoretical and practical aspects of java

PRE-REOUISITES

Formal introduction to Java programming language

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Define the basic concepts of algorithms and analyze the performance of algorithms.

CO2: Discuss various algorithm design techniques for developing algorithms.

CO3: Discuss various searching, sorting and graph traversal algorithms.

CO4: Understand NP completeness and identify different NP complete problems.

CO5: Discuss various advanced topics on algorithms.

UNIT I

Introduction to Java: Basics of Java programming, Data types, Variables, Operators, Control structures

S including selection, Looping, Java methods, Overloading, Math class, Arrays in java.

UNIT II

Objects and Classes: Basics of objects and classes in java, Constructors, Finalizer, Visibility modifiers, Methods and objects, Inbuilt classes like String, Character, StringBuffer, File, this reference.

UNIT III

Inheritance and Polymorphism: Inheritance in java, Super and sub class, Overriding, Object class, Polymorphism, Dynamic binding, Generic programming, Casting objects, Instance of operator, Abstract class, Interface in java, Package in java, UTIL package.

UNIT IV

Event and GUI programming: Event handling in java, Event types, Mouse and key events, GUI Basics, Panels, Frames, Layout Managers: Flow Layout, Border Layout, Grid Layout, GUI components like Buttons, Check Boxes, Radio Buttons, Labels, Text Fields, Text Areas, Combo Boxes, Lists, Scroll Bars, Sliders, Windows, Menus, Dialog Box, Applet and its life cycle, Introduction to swing.

UNIT V

I/O programming and Multithreading in java: Text and Binary I/O, Binary I/O classes, Object I/O, Random Access Files Thread life cycle and methods, Runnable interface, Thread synchronization, Exception handling with try-catch-finally, Collections in java, Introduction to JavaBeans and Network Programming..

OBJECTIVES

To introduce about artificial intelligence approaches to problem solving, various issues involved and application areas

PRE-REQUISITES: Knowledge of neural networks, data structures

COURSE OUTCOMES

CO1: Demonstrate fundamental understanding of artificial intelligence (AI) and expert systems. Solve basic AI based problems

CO2: Define the concept of Artificial Intelligence and Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.

CO3: Apply AI techniques to real-world problems to develop intelligent systems.

CO4: Select appropriately from a range of techniques when implementing intelligent systems.

CO5: Discuss the basics of ANN and different optimizations techniques

UNIT I

INTRODUCTION TO AI AND SEARCH TECHNIQUES: Foundation and history of AI; data, information and knowledge; AI problems and techniques – AI programming languages,

problem space representation with examples; blind search strategies, breadth first search, depth first search, heuristic search techniques: hill climbing: best first search, A * algorithm AO* algorithm, Minimax search procedure for Game Playing.

UNIT II

KNOWLEDGE REPRESENTATION ISSUES AND TECHNIQUES: Predicate logic; representing knowledge using rules. Semantic nets, partitioned nets, parallel implementation of semantic nets; frames, forward and backward chaining; frame based systems.

<u>UNIT III</u>

REASONING UNDER UNCERTAINITY: Reasoning under uncertainty, non monotonic reasoning; Review of probability; Baye's probabilistic interferences and Dumpster Shafer theory; statistical reasoning, fuzzy reasoning.

UNIT IV

PLANNING & LEARNING: Goal stack planning; non linear planning, hierarchical planning representation for planning; partial order planning algorithm. Basic concepts of Learning; rote learning, learning by taking advices, learning by problem solving, learning from examples, discovery as learning, learning by analogy; explanation based learning; neural nets;

genetic algorithms.

UNIT V

EXPERT SYSTEM AND APPLICATIONS OF ARTIFICIAL INTELLIGENCE: Expert systems: rule based systems architecture: Principles of natural language processing: knowledge acquisition concepts; AI application to robotics, and current trends in intelligent systems; parallel and distributed AI.

|---------|------------------|-----|----|
| | | 300 | 3 |

OBJECTIVE

To develop an understanding of modern network architectures from a design and performance perspective.;

PRE-REOUISITES

The major cocepts involve in wide area networks(WANs),local area networks (LANs) and wireless LANs

COURSE OUTCOMES

- 1. Explain the functions of the different layer of the OSI Protocol.
- 2. Draw the functional block diagram of wide-area networks (WANs), local area networks (LANs) and Wireless LANs (WLANs) describe the function of each block.
- 3. For a given requirement (small scale) of wide-area networks (WANs), local area networks (LANs) and Wireless LANs (WLANs) design it based on the market available component
- 4. For a given problem related TCP/IP protocol developed the network programming.
- 5. Configure DNS DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls using open source available software and tools

UNIT-1:DATA COMMUNICATION COMPONENTS

Representation of data and its flow Networks , Various Connection Topology, Protocols and Standards, OSI model, Transmission Media, LAN: Wired LAN, Wireless LANs, Connecting LAN and Virtual LAN, Techniques for Bandwidth utilization: Multiplexing - Frequency division, Time division and Wave division, Concepts on spread spectrum

UNIT-2: DATA LINK LAYER AND MEDIUM ACCESS SUB LAYER

Error Detection and Error Correction - Fundamentals, Block coding, Hamming Distance, CRC; Flow Control and Error control protocols - Stop and Wait, Go back - N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Random Access, Multiple access protocols -Pure ALOHA, Slotted ALOHA, CSMA/CD,CDMA/CA

UNIT-3: NETWORK LAYER

Switching, Logical addressing – IPV4, IPV6; Address mapping – ARP, RARP, BOOTP and DHCP– Delivery, Forwarding and Unicast Routing protocols.

UNIT-4: TRANSPORT LAYER

Process to Process Communication, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP Congestion Control; Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm

UNIT-5: APPLICATION LAYER

Domain Name Space (DNS), DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls, Basic concepts of Cryptography

LINGAYAS

| CS-212E | Theory of Computation | LTP | Cr |
|---------|-----------------------|-------|----|
| | 2 0 | 3-1-0 | 4 |

OBJECTIVE

To relay the theoretical and practical aspects of formal languages

PRE-REOUISITES

Formal languages and automata theory deals with the concepts of automata, formal languages, grammar, computability and decidability

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: To use basic concepts of formal languages of finite automata techniques.

CO2: To Design Finite Automata's for different Regular Expressions and Languages.

CO3: To Construct context free grammar for various languages

CO4: To solve various problems of applying normal form techniques, push down automata and Turing Machines

CO5: To participate in GATE, PGECET and other competitive examinations.

UNIT I

FINITE AUTOMATA (FA): Introduction, Deterministic Finite Automata (DFA) -Formal definition, simpler notations (state transition diagram, transition table), language of a DFA. Nondeterministic Finite Automata (NFA)- Definition of NFA, language of an NFA, Equivalence of Deterministic and Nondeterministic Finite Automata, Applications of Finite Automata, Finite Automata with Epsilon Transitions, Eliminating Epsilon transitions, Minimization of Deterministic Finite Automata, Finite automata with output (Moore and Mealy machines) and Inter conversion.

UNIT II

REGULAR EXPRESSIONS (RE): Introduction, Identities of Regular Expressions, Finite Automata and Regular Expressions- Converting from DFA's to Regular Expressions, Converting Regular Expressions to Automata, applications of Regular Expressions. REGULAR GRAMMARS: Definition, regular grammars and FA, FA for regular grammar, Regular grammar for FA. Proving languages to be non-regular -Pumping lemma, applications, Closure properties of regular languages

UNIT III

CONTEXT FREE GRAMMER (CFG): Derivation Trees, Sentential Forms, Rightmost and Leftmost derivations of Strings. Ambiguity in CFG's, Minimization of CFG's, CNF, GNF, Pumping Lemma for CFL's, Enumeration of Properties of CFL (Proof's omitted).

UNIT IV

PUSHDOWN AUTOMATA: Definition, Model, Acceptance of CFL, Acceptance by Final State and Acceptance by Empty stack and its Equivalence, Equivalence of CFG and PDA. TURING MACHINES (TM): Formal definition and behaviour, Languages of a TM, TM as accepters and TM as a computer of integer functions, Types of TMs.

to-be Univers

UNIT V

RECURSIVE AND RECURSIVELY ENUMERABLE LANGUAGES (REL): Properties of recursive and recursively enumerable languages, Universal Turing machine, The Halting problem, Undecidable problems about TMs. Context sensitive language and linear bounded automata (LBA), Chomsky hierarchy, Decidability, Post's correspondence problem (PCP), undecidability of PCP..

TEXT BOOK

| CS-216E | BASIC & Advanced Excel | L-T-P | Cr |
|---------|------------------------|-------|----|
| | | 0-0-4 | 2 |

Course Outcomes:

By the end of this course, students will be able to:

- 1. Create and manage Excel workbooks and worksheets, including importing and organizing data effectively.
- 2. Navigate within workbooks using advanced search and navigation tools, and customize the workbook environment to suit personal preferences.
- 3. Apply custom data formats, data validation, and advanced conditional formatting to manage and present data clearly and accurately.
- 4. Create and manage tables, utilize sorting and filtering options, and enhance data analysis by removing duplicates and summarizing data.
- 5. Design, format, and analyze data using charts and objects, applying various styles, layouts, and modifications to improve data visualization.

List of Experiments

- 1. Creating and Organizing Workbooks with Imported Data
- 2. Customizing Worksheet Tabs, Themes, and Layouts
- 3. Navigating and Searching Data within Workbooks
- 4. Applying Data Validation Rules for Controlled Input
- 5. Implementing Conditional Formatting to Highlight Data
- 6. Creating and Managing Excel Tables
- 7. Sorting and Filtering Data in Excel Tables
- 8. Using Basic Formulas and Functions for Data Analysis
- 9. Applying Advanced Functions for Enhanced Data Analysis
- 10. Creating and Customizing Charts for Data

| CS-252E | DATABASE MANAGEMENT SYSTEM LAB | L-T-P | Cr |
|---------|--------------------------------|-------|----|
| | | 0-0-2 | 1 |

OBJECTIVE

To provide knowledge about implementation of practical aspects of database i.e. creation of tables and applying queries using SQL queries

COURSE OUTCOMES

The students undergoing this course will be able:

CO1: To know the basics of structured query language

CO2: To aware about applying different queries on database structured in the form of tables

CO3: To learn about the different SQL queries performed using operators as well as constraints

CO4: To create views from created table to further organize the data

CO5: To learn about the basic operations of relational algebra

LIST OF EXPERIMENTS/EXERCISES

- 1. Introduction to SQL.
- 2. Write a query for:
- (i) Creation of table.
- (ii) Insertion of data into table
- (iii) Displaying the data of table.
- (iv) Deletion of data from table
- (v) Updating the data
- (vi) Modifying the structure of a table.
- 3. Finding unique names of all salesmen, deletion of the structure of a table, use of delete command with conditions, updating records of a table with conditions, altering structure of a table and changing size of existing column in the table
- 4. Arithmetic operators, logical operators and pattern matching operator.
- 5. Key constraints: primary key constraints, foreign key constraints, not null constraints and unique constraints; use of check constraints.
- 6. Aggregate and mathematical functions: count, count(*), Avg, max, min, sum, lower, upper, power, sqrt.
- 7. Creating views from single and multiple tables, drop views and creating index on the table and drop them
- 8. Binary operations in Relational Algebra: Union, Intersection, Set Difference, Join, Cartesian product.
- 9. Grouping of data into tables and listing records in ascending order or descending order.
- 10. Creation of sequences and explain use of sequences.
- 11. Access permissions in SQL.

COURSE OUTCOMES

- CO1 Explain artificial intelligence, its characteristics and its application areas.
- CO2 Formulate real-world problems as state space problems, optimization problems or constraint satisfaction problems
- CO3 Select and apply appropriate algorithms and AI techniques to solve complex problems.
- CO4 Design and develop an expert system by using appropriate tools and techniques.

LIST OF EXPERIMENTS

- 1. Study of Python programming language.
- 2. Write a program to find out route distance between two cities using Python.
- 3. Write a program to implement Tower of Hanoi using Python.
- 4. Write a program to calculate factorial of a number using Python.
- 5. Write a program to print the list of customer having different colored cars with price and model available using Python.
- 6. Write a program to implement water jug problem using Python.
- 7. Write a program to implement Breadth First Search using Python
- 8. Write a program to implement Depth First Search using Python
- 9. Write a program to solve 8-Queens problem using Python.
- 10. Write a program to solve Monkey Banana problem using Python.

OBJECTIVE

To develop the skills to gain a basic understanding of logic theory, soft computing techniques such as neural network theory, fuzzy logic and genetic algorithms.;

PRE-REOUISITES

Higher Engineering Mathematics, Critical thinking and problem-solving skills, Proficiency with algorithms, Good analytical skills, Programming skills

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Understand the basic concepts of artificial intelligence and soft computing CO2 Analyze various techniques of fuzzy logic, fundamental theory and concepts of neural network

CO3 Apply basic principles of AI in solutions that require problem-solving by intelligent search CO4 Apply AI techniques to real-world problems to develop intelligent systems UNIT- I:

Introduction to Artificial Intelligence(AI) Introduction and definition of Artificial Intelligence, Intelligent Agents: Agents and Environments, Rationality, Nature of Environment, Structure of Agent, types of Agent,

UNIT-II:

Problem Solving by Intelligent Search Searching for solutions, uninformed search strategies – Breadth-first search, depth-first search. Search with partial information (Heuristic search) Hill climbing, A*, AO*

UNIT-III:

Fuzzy Logic Introduction to Fuzzy Set: Fuzzy set theory, Fuzzy set Vs crisp set, Crisp relation & fuzzy relations, membership functions, Fuzzy Logic: Fuzzy Logic basics, Fuzzy Rules and Fuzzy Reasoning, Fuzzy inference systems: Fuzzification of input variables, defuzzification and fuzzy controllers

UNIT-IV:

Artificial Neural Network Introduction —Fundamental concept - Basic Models of Artificial Neural Networks —Important Terminologies of ANNs - McCulloch-Pitts Neuron, Neural Network Architecture: Perceptron, Single layer Feedforward ANN, Multilayer Feed Forward ANN, Activation functions, Supervised Learning: Delta learning rule, Back Propagation algorithm. Un-Supervised Learning algorithm: Self Organizing Maps

| CS-305E | CS-305E Compiler Design | LTP | Cr |
|---------|-------------------------|-------|----|
| | | 3-1-0 | 4 |

OBJECTIVE

To design the front end of the compiler, scanner, parser, intermediate code generator, object code generator, and the parallel compilation strategies.;

PRE-REOUISITES

Formal Grammars and Languages theory deals with the concepts of compilation techniques.

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Use compiler construction tools and describes the Functionality of each stage of compilation process

CO2: Construct Grammars for Natural Languages and find the Syntactical Errors/Semantic errors during the compilations using parsing techniques

CO3: Analyze different representations of intermediate code.

CO4: Construct new compiler for new languages.

CO5: Participate in GATE, PGECET and other competitive examinations

UNIT - I

FRONT END OF COMPILERS The structure of Compiler – Lexical analysis: Role of Lexical analyzer, Specification and recognition of tokens, Syntax Analysis: Top down parsing, Bottom up parsing, LR Parsers: SLR, CLR, and LALR.

UNIT - II

INTERMEDIATE CODE GENERATION Syntax Directed Definitions, Evaluation orders for syntax directed definitions, Syntax Directed Translation schemes, Intermediate languages: Three address code, Syntax tree, Postfix code – Declarations – Type checking – Expression translation – Back patching

UNIT - III

OBJECT CODE GENERATION Storage organization, Stack allocation space, Access to non-local data on the stack, Heap management - Issues in code generation - Design of code generator - Register

allocation and assignment – Instruction selection by tree rewriting – Optimal code generation for expressions – Dynamic programming code generation.

UNIT - IV

CODE OPTIMIZATION Basic blocks and Flow graphs – Optimization of basic blocks – Principal sources of optimizations – Data flow analysis – Constant propagation – Partial redundancy elimination - Peephole optimizations.

UNIT - V

PARALLELIZING COMPILER Basic concepts and examples – Iteration spaces – Affine array indexes – Data reuse – Array data dependence - Finding synchronization free parallelism – Synchronization between parallel loops, Locality optimizations.

|---------|------------------------------------|-----|----|
| CS-307E | Agile Development & Methodology | 300 | 3 |

Course Objectives:

Upon completing the course, students will be able to:

Familiarize themselves with the fundamental concepts and principles of Agile Software Development.

Understand and apply Agile estimation, planning techniques, and requirement management.

Course Outcomes:

After successfully completing this course, the students will be able to:

- CO1: Define and explain the common characteristics and principles of Agile development processes.
- CO2: Compare and contrast various Agile methodologies, such as Scrum, Extreme Programming
- (XP), and Lean Software Development.
- CO3: Differentiate between Agile software development models and traditional, plan-driven process

models.

CO4: Evaluate and identify which software project characteristics are most suitable for Agile processes.

UNIT-I: History of Agile Methodologies and Core Concepts

- Overview of traditional software development (Waterfall) and its limitations.
- Evolution of Agile and why it was needed.
- Differences between Agile and Lean development methodologies.
- Core principles of Lean and Agile.
- Definition and principles of XP.
- Practices of XP (Pair programming, Test-driven development, continuous integration).

UNIT-II: Agile Estimation, Planning, and Requirements Management

- Techniques for Agile estimation (Story Points, Planning Poker, T-Shirt sizing).
- How to plan Agile projects (Release Planning, Sprint Planning).
- The shift from traditional requirement gathering to Agile requirements.
- Writing effective User Stories.
- INVEST criteria for good User Stories.

UNIT-III: Tracking Agile Projects and Risk Management

- Time tracking in Agile (Burndown charts, Burnup charts).
- Techniques for tracking progress and velocity of Agile teams.
- Principles of Lean in software development.
- Differences between Lean and traditional development models.
- Overview of model-driven development and its role in Agile.

UNIT-IV: Agile Tools and Enterprise Agility

- Introduction to Agile tools (Jira, Trello, Asana).
- How to use tools for managing backlogs, tracking sprints, and collaboration.
- Concepts of enterprise agility and how large organizations can adopt Agile principles.
 - DSDM principles, phases, and how it fits within Agile frameworks.

Textbooks:

- 1. Agile Development with Scrum by Ken Schwaber & Mike Beedle
- 2. Integrating Agile Development in the Real World by Peter Schuh

| CS-309E | WEB TECHNOLOGY & SERVICES | LTP | Cr |
|---------|---------------------------|-----|----|
| | | 300 | 3 |

OBJECTIVE

• To understand the concepts and architecture of the World Wide Web.

- To understand and practice Markup Language.
- To understand and practice Embedded Dynamic Scripting on Client-side Internet Programming.
- To understand and practice Web Development Techniques on client-side.

PRE-REQUISITES

Basics of programming, Structure and HTML Tags, Images, List, Tables, Anchors and Form Elements

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Explain the history of the internet and related internet concepts that are vital in understanding web development.

CO2: Discuss the insights of internet programming and implement complete application over the web.

CO3: Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.

CO4: Utilize the concepts of JavaScript and Java

CO5: Use web application development software tools i.e. Ajax, PHP and XML etc. and identify the environments currently available on the market to design web sites.

UNIT I

INTRODUCTION TO WWW: Introduction to Computer networks - Internet Standards - Introduction to WWW - WWW Architecture - SMTP - POP3 - File Transfer Protocol - Overview of HTTP, HTTP request - response — Generation of dynamic web pages.

UNIT II

UI DESIGN: HTML5: What is HTML5 - Features of HTML5 - Semantic Tags - New Input Elements and tags - Media tags (audio and video tags) - Designing Graphics using Canvas API - Drag and Drop features - Geolocation API - Web storage (Session and local storage).

CSS3: What is CSS3 – Features of CSS3 – Implementation of border radius, box shadow, image border, custom web font, backgrounds - Advanced text effects(shadow) - 2D and 3D Transformations - Transitions to elements - Animations to text and elements

UNIT III

RESPONSIVE WEB DESIGN (RWD): Responsive Design: What is RWD – Introduction to RWD Techniques – Fluid Layout, Fluid Images and Media queries - Introduction to RWD Framework.

TWITTER BOOTSTRAP – Bootstrap Background and Features - Getting Started with Bootstrap - Demystifying Grids – Off Canvas - Bootstrap Components - JS Plugins - Customization

UNIT IV

INTRODUCTION TO JAVASCRIPT: Introduction - Core features - Data types and Variables - Operators, Expressions and Statements - Functions & Scope - Objects - Array, Date and Math related Objects - Document Object Model - Event Handling - Browser Object Model - Windows

and Documents - Form handling and validations.

OBJECT-ORIENTED TECHNIQUES IN JAVASCRIPT - Classes – Constructors and Prototyping (Sub classes and Super classes) – JSON – Introduction to AJAX.

UNIT V

INTRODUCTION TO JQUERY: Introduction – jQuery Selectors – jQuery HTML - Animations – Effects – Event Handling – DOM – jQuery DOM Traversing, DOM Manipulation – jQuery AJAX

1. LIST OF EXPERIMENT

- 2. Implementation of Simple Neural Network (McCulloh-Pitts model)
- 3. Study of ANFIS Architecture
- 4. Implementation of Perceptron Learning Algorithm
- 5. Implementation of Unsupervised Learning Algorithm
- 6. Write a Program to implement MP Model
- 7. To implement De-Morgan's Law.
- 8. Program for Pattern storage of 10 digits with Discrete Hopfield Network

9. Perceptron net for an AND function with bipolar inputs and targets.

| CS-359E | WEB TECHNOLOGY & SERVICES LAB | LT P | Cr |
|---------|-------------------------------|------|----|
| CS-359E | WED TECHNOLOGY & SERVICES LAD | 002 | 1 |

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Explain the history of the internet and related internet concepts that are vital in understanding web development.

CO2: Discuss the insights of internet programming and implement complete application over the web.

CO3: Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.

CO4: Utilize the concepts of JavaScript and Java

CO5: Use web application development software tools i.e. Ajax, PHP and XML etc. and identify the environments currently available on the market to design web sites.

LIST OF EXPERIMENTS

- 1 Design a web page using Physical and Logical tags of HTML.
- 2 Design a web page using
 - 2.1 Ordered List
 - 2.2
 - 2.2 Unordered List
 - 2.3 Nested Lists
- 3 Design a web page to show the use of image as a hyperlink
- 4 Design a web-page using frames and linking
- 5 Design a class Time Table using tables in HTML.
- 6 Code to create a bookmark.
- 7 Design a web-page showing the use of forms using HTML 4.01 and HTML 5 Tags.
- 8 Design a page using basic tags of HTML 5.0.
- 9 Design a web-page using style sheets (External, Internal and Inline)
- 10 Write a Program to print if the no is even or odd using JavaScript

- 11 Input a number and find the difference of the sum of factors and non-factors.
- WAP in JavaScript to print the pattern

12345

1234

123

12

1

- 13 WAP to Accept an Array of 10 numbers and display the sum of elements.
- 14 WAP to find greatest of all elements of an array
- 15 Design a web-page to show different validation checking using Java Script
- 16 WAP in PHP code for calculating S.I
- 17 WAP to Calculate factorial of a number
- 18 WAP to print the table of 10.
- 19 WAP to print the sum of diagonal elements
- 20 WAP to enter 5 elements each from Array1 and Array2 and print these elements using third array.
- 21 WAP to show database connectivity using PHP and Mysql.

| CS-302E | SOFTWARE ENGINEERING | LTP | Cr |
|---------|----------------------|-----|----|
| | | 300 | 3 |

COURSE OBJECTIVE

To provide basic knowledge of properties of software and its development processes, software quality, CASE tools, etc.

PRE-REOUISITES

Knowledge of computer programming, principles of management

COURSE OUTCOMES

The students undergoing this course will be able to:

CO1: Plan a software engineering process life cycle, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements

CO2: Able to elicit, analyze and specify software requirements through a productive working

relationship with various stakeholders of the project

- **CO3:** Analyze and translate a specification into a design, and then realize that design practically, using an appropriate software engineering methodology.
- **CO4:** Know how to develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice
- CO5: Able to use modern engineering tools necessary for software project management, time management and software reuse.

UNIT I

INTRODUCTION: Definition and Emergence of Software Engineering, Evolving Role of Software, Software Life Cycle Models, Software Characteristics, Applications, Software Product, Software Process, Software Crisis, Software Myths.

UNIT II

SOFTWARE PROJECT MANAGEMENT: Project management concepts, software process and project metrics project planning, project size estimation metrics, project estimation techniques, empirical estimation techniques, COCOMO- a heuristic estimation techniques,

staffing level estimation, team structures, staffing, risk analysis and management, project scheduling and tracking.

UNIT III

REQUIREMENTS ANALYSIS AND SPECIFICATION: Requirements engineering, system modeling and simulation, analysis principles: modeling, partitioning, software, prototyping: methods and tools; specification principles, representation, the software requirements specification and reviews analysis modeling: data modeling, functional modeling and informationflow: data flow diagrams, behavioral modeling; the mechanics of structured analysis: creating entity/ relationship diagram, data flow model, control flow model, the control and process specification.

UNIT IV

SYSTEM DESIGN AND COMPUTERAIDEDSOFTWARE ENGINEERING: Design Process: design and software quality, design principles; design concepts: abstraction, refinement, modularity, software architecture, control hierarchy, structural partitioning, software procedure, information hiding; functional independence, cohesion, coupling; design heuristics for effective modularity; design model; design documentation, architectural design: software architecture, CASE, building blocks; integrated case environments and architecture, repository.

UNIT V

TESTING AND MAINTENANCE: Software testing techniques, software testing fundamentals: objectives, principles, testability; test case design, white box testing, basis path testing: control structure testing: black box testing, testing for specialized environments, architectures and applications. software testing strategies: verification and validation, unit testing, integration testing, validation testing, alpha and beta testing; system testing, acceptance testing debugging approaches; software re-engineering, reverse engineering, restructuring, forward engineering, Software

maintenance, Adaptive, corrective and perfective, software reliability: measures of reliability and availability, software safety.

| CS- | | LTP | Cr |
|---------------|---------------------|-------|----|
| AIML- 302E | PATTERN RECOGNITION | 3 0 0 | 3 |

COURSE OUTCOMES

- **CO1:** Explain and compare a variety of pattern classification, structural pattern recognition, and pattern classifier combination techniques.
- CO2: Summarize, analyze, and relate research in the pattern recognition area verbally and in writing.
- CO3: Apply performance evaluation methods for pattern recognition, and critique comparisons of techniques made in the research literature
- CO4: Apply pattern recognition techniques to real-world problems such as document analysis and recognition.
- **CO5:** Implement simple pattern classifiers, classifier combinations, and structural pattern recognizers.

UNIT I

INTRODUCTION: Basics of pattern recognition, Design principles of pattern recognition system, Learning and adaptation, Pattern recognition approaches, Mathematical foundations – Linear algebra, Probability Theory, Expectation, mean and covariance, Normal distribution, multivariate normal densities, Chi squared test.

UNIT II

STATISTICAL PATTEN RECOGNITION: Bayesian Decision Theory, Classifiers, Normal density and discriminant functions,

UNIT III

PARAMETER ESTIMATION METHODS: Maximum-Likelihood estimation, Bayesian Parameter estimation, Dimension reduction methods -Principal Component Analysis (PCA), Fisher Linear discriminant

analysis, Expectation-maximization (EM), Hidden Markov Models (HMM), Gaussian mixture models.

UNIT IV

NONPARAMETRIC TECHNIQUES: Density Estimation, Parzen Windows, K-Nearest Neighbor Estimation, Nearest Neighbor Rule, Fuzzy classification.

UNIT V

UNSUPERVISED LEARNING & CLUSTERING: Criterion functions for clustering, Clustering Techniques: Iterative square - error partitional clustering - K means, agglomerative hierarchical clustering, Cluster validation.

| CS-AI- | COMPUTER NETWORK & | LT | Cr |
|--------|--------------------|-------|----|
| 304E | SECURITY | P | |
| 304E | | 3-1-0 | 4 |

OBJECTIVES

The main objective behind this course is to learn about the various network attacks and preventing attacks. This course is designed to cover Application security, Network security, Web security etc.

PREREQUISITE

Data Communications and Computer Networks, Computer Programming, Data Structures, Prime Number Theory

The students undergoing this course will be able to:

CO1: Understand and analyze public-key cryptography, RSA and other public-key cryptosystems

CO2: Analyze and design hash and MAC algorithms, and digital signatures.

CO3: Design network application security schemes, such as PGP, S/ MIME, IPSec, SSL, TLS, HTTPS, SSH, etc.

CO4: Understand key management and distribution schemes and design User Authentication Protocol

CO5: Know about Intruders and Intruder Detection mechanisms, Types of Malicious software, Firewall Characteristics, Types of Firewalls, Firewall Location and Configurations.

UNIT I

ATTACKS ON COMPUTERS & COMPUTER SECURITY: Introduction; The need of Security; Security Approaches; Principal of Security; Types of Attacks,

CRYPTOGRAPHY: Introduction; Plain Text & Cipher Text; Substitution Techniques; Transposition Techniques; Types of Cryptography; Steganography; Symmetric Key Algorithm: Algorithm Types and Modes, DES; Asymmetric Key Algorithm: RSA, Digital Signatures

UNIT II

DIGITAL CERTIFICATES AND PUBLIC KEY INFRASTRUCTURE: Digital Certificates; Private Key Management; The PKIX Model; Public Key Cryptography Standards; Creating Digital certificates using Java

UNIT III

INTERNET SECURITY PROTOCOLS: Introduction; Secure Socket Layer(SSL); Secure Electronic Transaction (SET); Electronic Money; Email security; Wireless application protocol (WAP); Security in GSM: Security in 3G

UNIT IV

USER AUTHENTICATION AND KERBEROS: Introduction, Authentication Basics; Passwords; Authentication Tokens; Certificate Based Authenticaton; Biometric Authentication; Kerberos

UNIT V

NETWORK SECURITY, FIREWALL AND VPN: Introduction, Firewalls: Types of Firewalls; IP Security; Virtual Private Network; Intrusion,

CASE STUDIES ON NETWORK SECURITY: Introduction; secure Inter branch payment transactions; Denial of Service attacks; IP Spoofing attacks; Contract Signing; Secret Splitting; Virtual elections

LIST OF EXPERIMENTS

- 1. Phases in software development project, overview, need, coverage of topics
- 2. To assign the requirement engineering tasks
- 3. To perform the system analysis: Requirement analysis, SRS
- 4. To perform the function oriented diagram : DFD and Structured chart
- 5. To perform the user's view Analysis: Use case diagram
- 6. To draw the structural view diagram: Class diagram, object diagram
- 7. To draw the behavioural view diagram: Sequence diagram, Collaboration diagram
- 8. To draw the behavioural view diagram: State-chart diagram, Activity diagram
- 9. To draw the implementation view diagram: Component diagram
- 10. To draw the environmental view diagram : Deployment diagram

| | CS-AIML- | PATTERN RECOGNITION LAB | LTP | Cr |

LIST OF EXPERIMENTS

- 1. Automatic Classification.
- 2. Analysis of Sensor Input Data
- 3. Speech Recognition and Understanding.
- 4. Computer Vision.
- 5. Multiple Criteria and Optimization
- 6. Image Analysis.
- 7.Image Segmentation.
- 8.Image Fusion

| CS- | Mongo DB Lab | LTP | Cr |
|------|--------------|------|----|
| 358E | | 0 08 | 4 |

Course Outcomes:

Upon successful completion of the course, the student will be able to:

- Installing and configuring MongoDB in Windows
- Perform all database operations using MongoDB
- Develop applications by integrating MongoDB with Java/PHP.

List of Experiments:

- 1. MongoDB installation and configuration in Windows.
- 2. Demonstrate how to create and drop a database in MongoDB.
- 3. Creating the Collection in MongoDB on the fly.
- 4. Creating collection with options before inserting the documents and drop the collection created.
- 5. MongoDB insert document
- a. Insert single document
- b. Insert multiple documents in collection
- 6. Querying all the documents in JSON format and Querying based on the criteria.
- 7. MongoDB update document
- a. Using update() method.
- b. Using save() method.
- 8. MongoDB delete document from a collection.
- a. Using remove() method.
- b. Remove only one document matching your criteria
- c. Remove all documents
- 9. MongoDB Projection
- 10. limit(), skip(), sort() methods in MongoDB
- 11. MongoDB indexing
- a. Create index in MongoDB
- b. Finding the indexes in a collection
- c. Drop indexes in a collection
- d. Drop all the indexes
- 12. MongoDB with Java and PHP
- a. Create a simple application that uses MongoDB with Java
- b. Create a simple application that uses MongoDB with PHP

Semester 7th and 8th

LINGAYA'S VIDYAPETH

Deemed-to-be University u/s 3 of UGC Act 1956

| CC 401E | DEED LEADNING | LTP | Cr |
|---------|---------------|-------|----|
| CS-401E | DEEP LEARNING | 3 0 0 | 3 |

OBJECTIVES

The objective of this course is to cover the fundamental of neural networks as well as some advanced topics such as recurrent neural networks, long short term memory cells and convolutional neural networks. The course also requires students to implement programming assignments related to these topics.

COURSE OUTCOMES

- CO1: Understand the fundamentals and current usage of the TensorFlow library for deep learning research and the graphical computational model of TensorFlow
- CO2: Understand the context of neural networks and deep learning
- CO3: Design recurrent neural networks with attention mechanisms for natural language classification, generation, and translation.
- **CO4:** Perform regularization, training optimization, and hyperparameter selection on deep models.
- **CO5**: Explore the parameters for neural networks

UNIT 1

BASICS: Biological Neuron, Idea of computational units, McCulloch–Pitts unit and Thresholding logic, Linear Perceptron, Perceptron Learning Algorithm, Linear separability. Convergence theorem for Perceptron Learning Algorithm.

FEEDFORWARD NETWORKS: Multilayer Perceptron, Gradient Descent, Backpropagation, Empirical Risk Minimization, regularization, autoencoders.

UNIT II

DEEP NEURAL NETWORKS: Difficulty of training deep neural networks, Greedy layerwise training. **BETTER TRAINING OF NEURAL NETWORKS:** Newer optimization methods for neural networks (Adagrad, adadelta, rmsprop, adam, NAG), second order methods for training, Saddle point problem in neural networks, Regularization methods (dropout, drop connect, batch normalization).

UNIT III

RECURRENT NEURAL NETWORKS: Back propagation through time, Long Short Term Memory, Gated Recurrent Units, Bidirectional LSTMs, Bidirectional RNNs

CONVOLUTIONAL NEURAL NETWORKS: LeNet, AlexNet.

UNIT IV

GENERATIVE MODELS: Restrictive Boltzmann Machines (RBMs), Introduction to MCMC and Gibbs Sampling, gradient computations in RBMs, Deep Boltzmann Machines.

UNIT V

RECENT TRENDS: Variational Autoencoders, Generative Adversarial Networks, Multi-task Deep Learning, Multi-view Deep Learning

APPLICATIONS: Vision, NLP, Speech (just an overview of different applications in 2-3 lectures)

TEXT BOOKS

Deep Learning, Ian Goodfellow and Yoshua Bengio and Aaron Courville, MIT Press, 2016.

| CC | COMPLETED VICTOR | LTP | Cr |
|--------------|------------------|-------|----|
| CS- AIML- | COMPUTER VISION | 3-0-0 | 3 |
| 403E | | | |

COURSE OUTCOMES

CO1: identify basic concepts, terminology, theories, models and methods in the field of computer vision.

CO2: describe known principles of human visual system.

CO3: describe basic methods of computer vision related to multi-scale representation, edge detection and detection of other primitives, stereo, motion and object recognition.

CO4: suggest a design of a computer vision system for a specific problem.

UNIT I

COMPUTER VISION: AN INTRODUCTION: Introduction to computer vision and images, Basic image operation, Mathematical operations on images, Sunglass filter: A simple application, Bitwise operations, Image Annotation

UNIT II

IMAGE FORMATION MODELS: Monocular imaging system, Radiosity: The 'Physics' of Image Formation, Radiance, Irradiance, BRDF, color etc, Orthographic & Perspective Projection, Camera model and Camera calibration, Binocular imaging systems, Multiple views geometry, Structure determination, shape from shading, Photometric Stereo, Depth from Defocus, Construction of 3D model from images

UNIT III

OBJECT RECOGNITION: TRADITIONAL AND DEEP LEARNING METHODS: HoG/SIFT features, Bayes classifiers, SVM classifiers, Image classification, object detection and semantic segmentation, adversarial attacks. Various neural network architectures, visualization techniques

UNIT IV

INTRODUCTION TO NEURAL NETWORKS: Artificial neural networks, loss functions, back propagation and SGD, Batch Normalization.

UNIT V

MOTION ANALYSIS AND ACTIVITY RECOGNITION: Motion detection and tracking, Inference of human activity from image sequences

TEXT BOOKS

- 1. Computer Vision A modern approach, by D. Forsyth and J. Ponce, Prentice Hall Robot Vision, by B. K. P. Horn, McGraw-Hill.

| CS-AI-401E | SOFT COMPUTING | L-T-P | Cr |
|------------|----------------|-------|----|
| | | 3-0-0 | 3 |

OBJECTIVE

To introduce the soft computing concepts and techniques and to foster their abilities in designing appropriate technique for a given scenario. To implement soft computing based solutions for real world problems. T give students knowledge about non-traditional techniques and fundamentals of artificial neural networks, fuzzy logic and genetic algorithms. To provide students hands-on experience on MATLAB to implement various strategies

PRE-REOUISITES

Knowledge of Mathematics.

COURSE OUTCOMES

The students undergoing this course will be able:

- CO-1 Identify and describe soft computing techniques and their roles in building intelligent machines.
- CO-2 Apply fuzzy logic and reasoning to handle uncertainty and solve various engineering problems.
- CO-3 Apply genetic algorithms to combinatorial optimization problems.
- **CO-4** Evaluate and compare solutions by various soft computing approaches for a given problem.
- **CO-5** Use various tools to solve soft computing problems.

UNIT I

INTRODUCTION TO SOFT COMPUTING AND NEURAL NETWORKS: Evolution of

Computing: Soft Computing Constituents, From Conventional AI to Computational Intelligence: Machine Learning Basics.

UNIT 2

FUZZY LOGIC: Fuzzy Sets, Operations on Fuzzy Sets, Fuzzy Relations, Membership Functions: Fuzzy Rules and Fuzzy Reasoning, Fuzzy Inference Systems, Fuzzy Expert Systems, Fuzzy Decision Making.

LINGAYA'S VIDYAPETH

Deemed-to-be University u/s 3 of UGC Act 1956

UNIT 3

NEURAL NETWORKS: Machine Learning Using Neural Network, Adaptive Networks, Feed forward Networks, Supervised Learning Neural Networks, Radial Basis Function Networks: Reinforcement Learning, Unsupervised Learning Neural Networks, Adaptive Resonance architectures, Advances in Neural networks

UNIT 4

GENETIC ALGORITHMS: Goals of optimization, comparison with traditional methods, schemata, Terminology in GA – strings, structure, parameter string, data structures, operators, coding fitness function, algorithm, applications of GA in Machine Learning : Machine Learning Approach to Knowledge Acquisition.

UNIT 5

Matlab/Python Lib: Introduction to Matlab/Python, Arrays and array operations, Functions and Files, Study of neural network toolbox and fuzzy logic toolbox, Simple implementation of Artificial Neural Network and Fuzzy Logic

TEXT BOOKS:
